

Nama: Ngurah Bagus Putra Arthawan

NIM: 2201010556

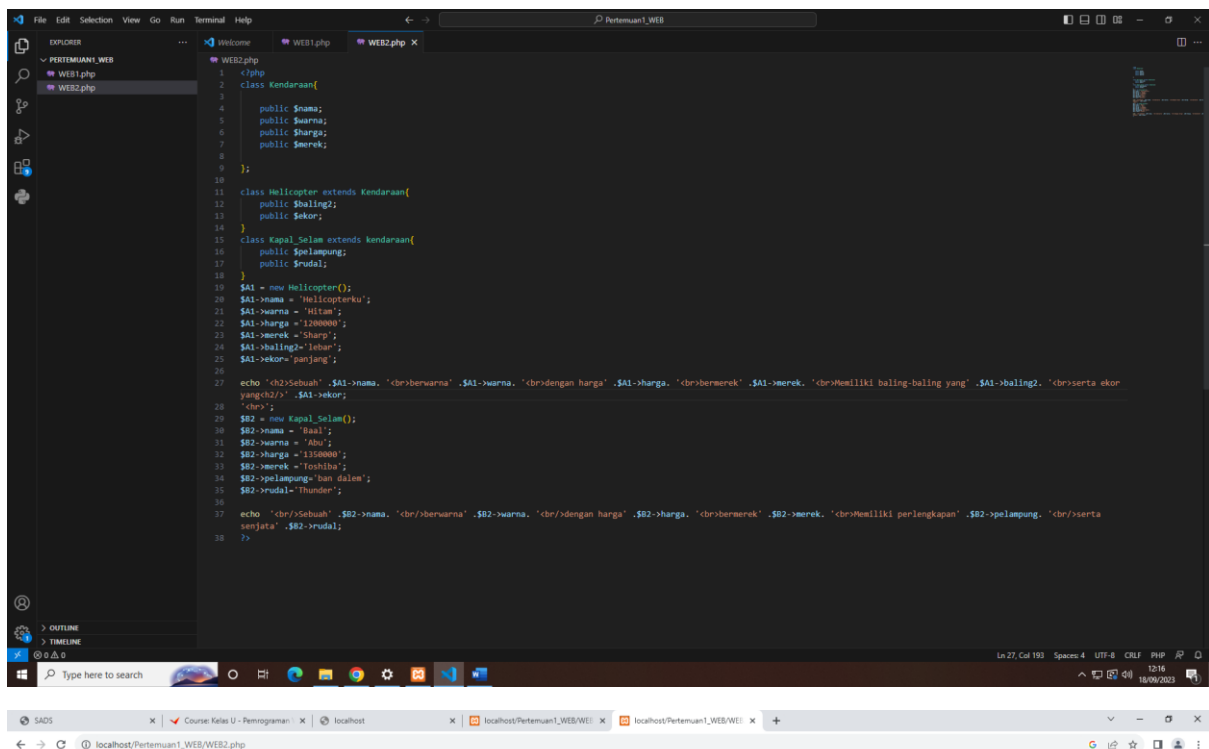

The screenshot shows a VS Code editor with a file named `WEB1.php` containing PHP code. The code defines a base class `Organ` with properties `$nama`, `$warna`, and `$berat`. It then creates two subclasses: `Jantung` (Heart) and `Ginjal` (Kidney). The `Jantung` class has properties `$nama`, `$warna`, and `$berat`. The `Ginjal` class has properties `$nama`, `$warna`, and `$berat`. The code also includes a `$t1` variable and a `$t2` variable. The output in the browser shows the details of these objects.

```
1 <?php
2 class Organ{
3     public $nama;
4     public $warna;
5     public $berat;
6 }
7
8 $jantung = new Organ();
9 $jantung->nama = 'Jantung sapi';
10 $jantung->warna = 'Merah';
11 $jantung->berat = '1.0';
12
13 echo '<h2>ini adalah '.$jantung->nama. 'berwarna:'. $jantung->warna. 'berat:'. $jantung->berat. '<br>';
14
15 $ginjal = new Organ();
16 $ginjal->nama = 'Ginjal sapi';
17 $ginjal->warna = 'Biru';
18 $ginjal->berat = '3.0';
19 echo 'ini adalah '.$ginjal->nama. 'berwarna:'. $ginjal->warna. 'berat:'. $ginjal->berat;
20
21 $t1 = new Organ();
22
23 $t2 = new Organ();
```

Output in browser: ini adalah Jantung sapi berwarna:Merah berat:1.0
ini adalah Ginjal sapi berwarna:Biru berat:3.0

Parent&child

The screenshot shows a VS Code editor with a file named `WEB2.php` containing PHP code. The code defines a base class `Kendaraan` with properties `$nama`, `$warna`, `$harga`, and `$merek`. It then creates two subclasses: `Helikopter` and `Kapal Selam`. The `Helikopter` class has properties `$nama`, `$warna`, `$harga`, `$merek`, `$baling`, and `$ekor`. The `Kapal Selam` class has properties `$nama`, `$warna`, `$harga`, `$merek`, `$perlengkapan`, and `$senjata`. The code also includes a `$t1` variable and a `$t2` variable. The output in the browser shows the details of these objects.

```
1 <?php
2 class Kendaraan{
3     public $nama;
4     public $warna;
5     public $harga;
6     public $merek;
7 }
8
9
10 class Helikopter extends Kendaraan{
11     public $baling;
12     public $ekor;
13 }
14
15 class KapalSelam extends Kendaraan{
16     public $perlengkapan;
17     public $senjata;
18 }
19
20 $t1 = new Helikopter();
21 $t1->nama = 'Helikopterku';
22 $t1->warna = 'Hitam';
23 $t1->harga = '1200000';
24 $t1->merek = 'Sharp';
25 $t1->baling = 'besar';
26 $t1->ekor = 'panjang';
27
28 echo '<h2>Sebuah '.$t1->nama. 'berwarna:'. $t1->warna. 'dengan harga:'. $t1->harga. 'bermerek:'. $t1->merek. 'Memiliki baling-baling yang:'. $t1->baling. 'serta ekor:'. $t1->ekor. '<br>';
29
30 $t2 = new KapalSelam();
31 $t2->nama = 'Baal';
32 $t2->warna = 'Abu';
33 $t2->harga = '1350000';
34 $t2->merek = 'Toshiba';
35 $t2->perlengkapan = 'ban dalam';
36 $t2->senjata = 'Thunder';
37
38 echo '<h2>Sebuah '.$t2->nama. 'berwarna:'. $t2->warna. 'dengan harga:'. $t2->harga. 'bermerek:'. $t2->merek. 'Memiliki perlengkapan:'. $t2->perlengkapan. 'serta senjata:'. $t2->senjata. '<br>';
